SUMMARY

SOC-focused cybersecurity analyst with hands-on experience in threat detection, vulnerability management, and incident triage using Microsoft Sentinel, Defender, and Tenable. Built and deployed two production AI workflows: an agentic alert triage system that reduced investigation time by over 95%, and an automated vulnerability prioritization pipeline validated against 14,866 live findings using CVSS, CISA KEV, and EPSS scoring. Transitioned into cybersecurity through deliberate self-study from a background in education, bringing strong documentation habits, cross-functional communication, and structured workflow development into technical roles.

EXPERIENCE

Cybersecurity Support Analyst & AI Automation Engineer – Contract LogN Pacific | Dec. 2025 – present

- Designed and deployed an AI-assisted triage workflow using prompt-engineered agents integrated with Microsoft Sentinel and Tenable, automating repetitive alert triage and vulnerability prioritization decisions from 20-45 minutes to under a minute.
- Engineered an automated CVE prioritization pipeline integrating the Tenable API with a prompt-engineered agent to rank remediation targets by severity and business impact – outputting structured remediation tables and deployable as a scheduled cron job or post-scan webhook trigger.
- Conducted vulnerability scans, provided detailed reports, and implemented PowerShell-based remediations, contributing to a 100% reduction in critical, 90% in high, and 76% in medium vulnerabilities (30 days) for the server team.
- Performed vulnerability assessments and risk prioritization using Tenable across Windows and Linux environments.
- Executed secure configurations and compliance audits (DISA STIG) with Tenable to meet industry standards.
- Automated remediation processes and STIG implementations using PowerShell to address critical vulnerabilities.
- Deep understanding of the “soft” side of Vulnerability Management: rapport, trust, transparency, and business need.
- Performed threat hunting with EDR, detecting IoCs from brute force attacks, data exfiltration, and ransomware.
- Designed, tested, and published advanced threat hunting scenarios for incident response tabletop exercises
- Developed custom detection rules in Microsoft Defender for Endpoint to automate isolation and investigation of compromised systems.
- Reduced brute force incidents by 100% by implementing inbound NSG/firewall rules to limit Internet exposure.
- Created Microsoft Sentinel dashboards to monitor logon failures and malicious traffic using threat intelligence.
- Experienced with KQL (similar to SQL/SPL); used to query logs within the SIEM and EDR platform.

IT Support Specialist

G&E Impressions, Inc. | May 2025 – Dec. 2025

- Supported Windows endpoints by diagnosing and resolving hardware, software, and configuration issues, reducing recurring system availability disruptions and maintaining operational continuity across the organization.
- Resolved network connectivity issues including Wi-Fi instability, DNS misconfigurations, and TCP/IP conflicts, ensuring reliable access to business-critical systems and identifying recurring patterns to prevent repeat incidents.
- Applied baseline security practices, including OS patching, credential hygiene, backup procedures, and basic access controls to reduce operational and security risk.
- Documented incidents, resolutions, and process improvements in structured troubleshooting workflows, maintaining consistent records to support faster resolution of recurring issues.
- Provided on-call support by triaging incoming issues, assessing business impact, and prioritizing remediation based on urgency and operational risk.

Cybersecurity Analyst

Self-directed Home Lab | May 2025 – present

- Built and maintained a SOC-focused home lab (Kali + Windows) to simulate alert triage, host-based investigations, and network traffic analysis using repeatable investigation workflows.
- Conducted phishing email analysis by examining raw message headers, sender authentication results (SPF, DKIM, DMARC), embedded URLs, and attachment hashes – practicing IOC extraction and triage decisions .
- Executed controlled exploitation scenarios (EternalBlue in isolated environments) to observe post-exploitation artifacts and endpoint telemetry – translating attacker-side findings into defender-centric detection logic and MITRE ATT&CK technique mapping.
- Practiced alert tuning by generating controlled noisy activity (failed authentications, internal port scans) and iteratively refining detection rules to reduce false positive volume

- Documented investigation steps, findings, and remediation recommendations, aligning technical observations with vulnerability management and security hardening processes.

Elementary Education Teacher

School District 27J – Colorado | Aug. 2024 – May 2025

- Managed high-volume, fast-paced dynamic environments requiring real-time prioritization, pattern recognition, and clear communication of complex information to stakeholders with varying levels of technical understanding.
- Built and maintained structured documentation systems, including lesson plans, incident reports, and evaluation frameworks; developed disciplined documentation practices directly applicable to SOC runbooks, standard operating procedures (SOPs), and post-incident reporting.
- Designed and delivered structured training programs across multiple subjects and proficiency levels, creating scalable curriculum, assessment frameworks, and instructional materials; regularly presented performance insights and progress updates to stakeholders, translating complex concepts into accessible, actionable information.

English Second Language Instructor

Kwangwoon / English Program in Korea – Seoul, South Korea | Apr. 2018 – Dec. 2023

PROJECTS

SOC Triage Agent — github.com/jawadchar/alert-triage — Designed, developed, and deployed a production agentic AI system using the Anthropic Claude API that autonomously investigates Microsoft Sentinel security incidents, executes dynamic KQL queries, enriches threat indicators via external APIs, and produces structured analyst output, directly satisfying the selective factor requirement to implement AI solutions in production environments.

Vuln Triage Agent — github.com/jawadchar/vuln-agent — Built a production-grade async AI pipeline integrating the Tenable.io API with NVD CVSS, CISA KEV, and EPSS intelligence feeds to automate vulnerability risk prioritization using composite scoring logic, validated against a live environment processing 14,866 findings and demonstrating applied cybersecurity AI engineering in a cloud-connected, API-driven architecture.

EDUCATION

University of Houston – Bachelor of Science in Psychology with Biology minor

CERTIFICATIONS AND AFFILIATIONS

CompTIA CySA+; CompTIA Security+

Microsoft Certified: Security Operations Analyst Associate (SC-200) – In Progress

ISSA – Member; CYBR.SEC.Community – Active Participant

ADDITIONAL SKILLS AND TECHNOLOGIES

Sentinel, KQL, Python, PowerShell/Bash Scripting, IAM, EDR, IDS/IPS, ELK Stack, Linux, Syslog, Azure, AWS, Cloud Security, IaaS/PaaS/SaaS, Firewall/NSG Configuration, TCP/IP Networking, OS Hardening, Imaging and Deployment, Account Provisioning, IoC Analysis, MITRE ATT&CK Mapping, CVE/CWE Management, CVSS Scoring, Risk Prioritization, Vulnerability Remediation, OWASP Top 10, Incident Response, Log Analysis, Network Security Monitoring, SOAR Concepts, Tenable API Integration, REST API Integration, Agentic Workflow Development, AI-Assisted SOC Triage, AI-Driven Vulnerability Prioritization, Security Automation Workflow Design, LLM Prompt Engineering, OWASP LLM Top 10, NIST AI RMF, LLM Security & Prompt Injection Awareness, AI Governance, NIST 800-37, NIST 800-53, NIST 800-61, NIST 800-40, NIST Cybersecurity Framework, PCI-DSS, GDPR, HIPAA, ISO 27001, SOC 2 Compliance Support, Audit Documentation, SOPs, SQL
